CHAPTER 1

Welcome to PlicoPDF

PlicoPDF is a desktop app for everyday PDF work on Windows 10 and Windows 11 (64-bit). Everything happens on your computer: your documents are never uploaded, and you don't need an account or an internet connection.

Private by design

Files are opened, processed and saved only on your PC. No telemetry, no ads, no account.

Your original stays safe

Tools create a new file and leave the original unchanged. In Organize, a file changes only when you save, and every page operation can be undone.

All pages at a glance

Every page appears as a thumbnail. Rearrange pages with drag and drop, rotate, delete, extract and insert them.

Made for long documents

Thumbnails load only when they are visible, so documents with hundreds of pages stay responsive.

What's new in version 0.8.0

- **Compare PDFs, rebuilt.** Compare the text and the look of two PDFs: changed words and characters, added, deleted and moved pages, images and graphics, with filters, synchronized views and a PDF or JSON report. See chapter 12.
- **A new Organize layout.** Thumbnails in a column on the left, the selected page fitted to the window width with a **Fit width** button, and the Properties panel shown only when you need it. See chapter 4.

About this guide

Names in **bold** are the exact labels of buttons, fields and menus in the English interface. The screenshots show the app in English; some may come from a slightly earlier build, so small details can differ.

PlicoPDF is a free public beta. Features that are planned but not available yet are listed only in chapter 18, *Coming next*.

CHAPTER 2

Getting started

Install from the Microsoft Store

Search for **PlicoPDF** in the Microsoft Store app, or follow the link on **plicopdf.com**, and click **Get**. The Store version is updated automatically by the Microsoft Store.

Or download the installer

1. Download **Plico-win-Setup.exe** from **download.plicopdf.com** (or from the download button on plicopdf.com).
2. Run it. PlicoPDF installs for your user only and does not need administrator rights.
3. Open PlicoPDF from the Start menu or the desktop shortcut.

Windows may show a warning. The beta is not code-signed yet, so Windows SmartScreen may say "Windows protected your PC" because it does not recognize the publisher. Click **More info**, then **Run anyway**. If you want to check the file, compare its SHA-256 with the checksums published on the download page.

Portable version

A portable version (**Plico-win-Portable.zip**) is also available. Extract the zip to a folder you can write to and start PlicoPDF from there: it runs without installation and updates itself the same way as the installed version.

> The first time you start the portable version, your antivirus may scan it and block it for a moment. If PlicoPDF does not open, wait a few seconds and start it again.

Language and theme

PlicoPDF is available in English and Italian. By default it follows the language of Windows; you can change it in **Settings** › **Language** without restarting. The **Theme** (**Light**, **Dark** or **Use Windows setting**) is in **Settings** › **Appearance**. Numbers and dates always follow the regional settings of Windows.

Updates

When PlicoPDF starts, it checks whether a newer version is available. The request asks only for the latest version number. If there is one, PlicoPDF tells you and installs it only after you confirm. Open **Settings** › **About** to **Check for updates**, to **Download and install…** a new version, or to turn off **Check for updates when PlicoPDF starts**. The Microsoft Store version is updated by the Store.

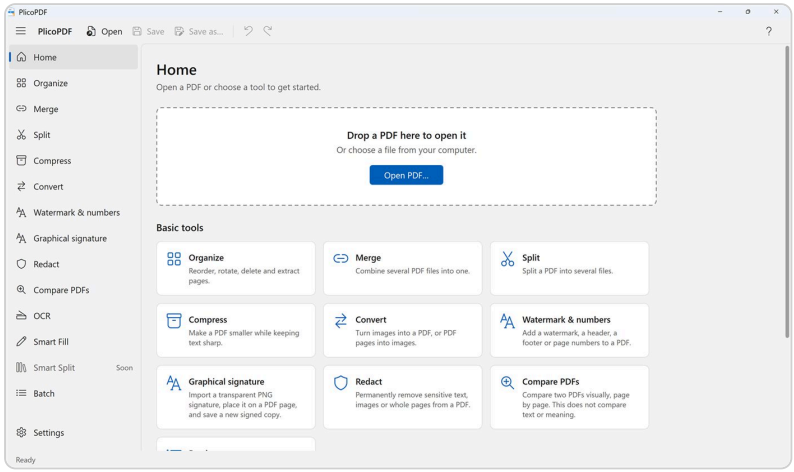

Feedback

Found a problem or have an idea? Use **Report a problem…** or **Request a feature…** in **Settings** › **About**, or in the **Help and feedback** menu (the **?** button at the top right). PlicoPDF opens a pre-filled email to **info@plicopdf.com** in your email app, with the version, Windows version and language. Nothing is sent until you send it yourself.

CHAPTER 3

The main window

Everything happens in one window: choose a tool in the navigation on the left and work in the page on the right.

The Home page: open a PDF or choose a tool.

Navigation

The navigation lists **Home**, **Organize**, **Merge**, **Split**, **Compress**, **Convert**, **Watermark & numbers**, **Graphical signature**, **Redact**, **Compare PDFs**, **OCR**, **Smart Fill**, **Batch** and **Settings**. Items marked **Soon** are planned but not available yet. Click ≡, or make the window narrow, to show icons only; PlicoPDF remembers your choice.

Tools that work on a single PDF are pre-filled with the document open in Organize. They use the saved file: save first if you want to include changes you have not saved yet.

Command bar

The bar at the top contains **Open**, **Save**, **Save as…**, **Undo** and **Redo** for the document open in Organize, and the **Help and feedback** menu. Results and errors appear in a message bar at the top of the page, with **Open file** or **Open folder** buttons and technical **Details** when available.

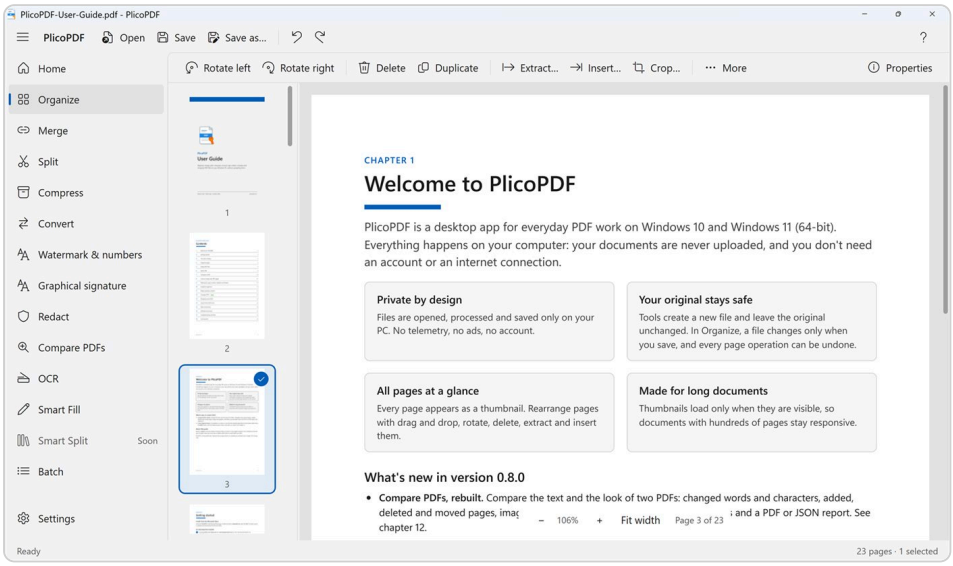

Keyboard shortcuts

Keys	Action	Keys	Action
Ctrl + O	Open a PDF	Ctrl + A	Select all pages
Ctrl + S	Save	Del	Delete the selected pages
Ctrl + Shift + S	Save as a new file	Esc	Clear the page selection
Ctrl + Z / Y	Undo / Redo	Alt + ↑ / ↓	Move pages, files or images up or down

CHAPTER 4

Organize pages

Organize shows every page of a PDF as a thumbnail, with a large preview of the selected page. Reorder, rotate, delete, duplicate, extract, insert and crop pages, and edit the document information.

Organize: thumbnails on the left, the selected page fitted to the window width.

Open a PDF

Click **Open** or press Ctrl + O, drop a PDF onto the window, or click **Open PDF...** on the Home page. You can also pass a PDF to PlicoPDF on the command line.

The layout

- **Thumbnails** are shown in a single column on the left. Drag the edge of the pane to widen it and see more columns.
- **The selected page** is shown fitted to the window width. Use **Fit width**, next to the − and + buttons, to fit it again; − / + or the mouse wheel change the zoom.
- **The Properties panel** on the right is hidden until you click **Properties**. It shows the file name, location, number of pages and file size, the size of the selected pages, and the document information.

Work with pages

Select one or more thumbnails, then use the toolbar. **Select all pages** is in the **More** menu.

Action	How
Reorder	Drag pages in the thumbnails, also several selected pages at once, or press Alt + ↑ / ↓.
Rotate left / Rotate right	90° at a time; click again for 180° or 270°.
Delete	Removes the selected pages (or press Del).
Duplicate	Creates a copy of the selected pages.

Action	How
Extract…	Saves the selected pages as a new PDF.
Insert…	Inserts all pages of another PDF after the selection.
Crop…	Sets the visible area in PDF points, measured from the bottom-left corner, on the MediaBox, CropBox, BleedBox or TrimBox. Content is not deleted.
More	**Watermark…**, **Header, footer and page numbers…**, **Export pages as images…**, **Recognize text (OCR)…** and **Select all pages**.

Document information

In the **Properties** panel, under **Document information**, view or edit **Title**, **Author**, **Subject**, **Keywords** and **Created with**, or click **Clear all**. The changes are written to the file when you save.

Save

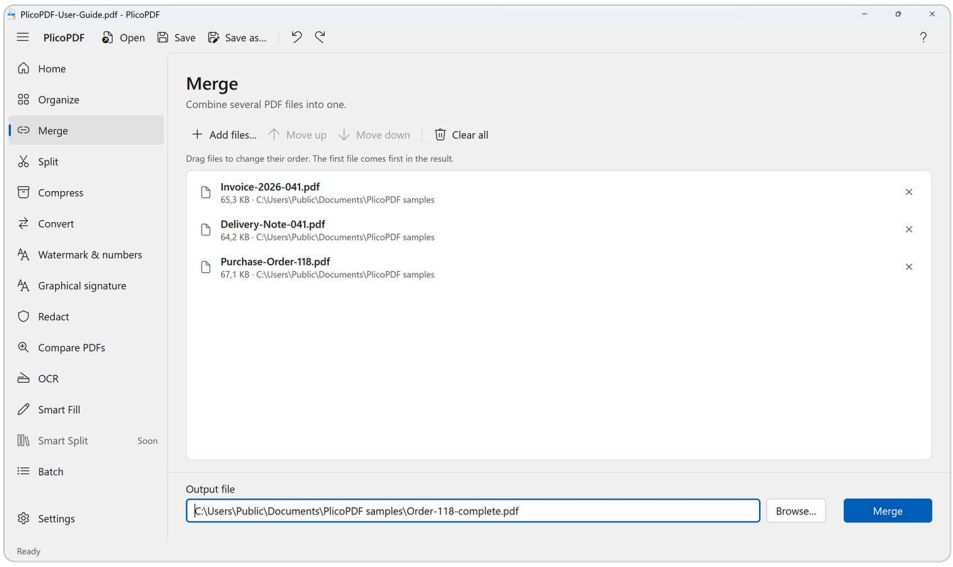

Save replaces the document, **Save as…** creates a new file. Every page operation can be undone with **Undo** until you close the document. If you close PlicoPDF or open another file with unsaved changes, PlicoPDF asks whether to save them.

> **Saving is safe.** PlicoPDF writes a temporary file, checks it and only then replaces the document. The original is never touched before you save.

CHAPTER 5

Merge PDF files

Combine several PDF files into one, in the order you choose.

Merge: the files are combined from top to bottom.

1. Choose **Merge** in the navigation.
2. Click **Choose files...** or **Add files...**, or drop PDF files onto the window. Add at least two.
3. Drag the files to change their order, or use **Move up** and **Move down**. The first file comes first in the result. **Remove** and **Clear all** take files off the list.
4. Check the **Output file** (click **Browse...** to change it) and click **Merge**. PlicoPDF creates a new PDF; the files you added are not changed.

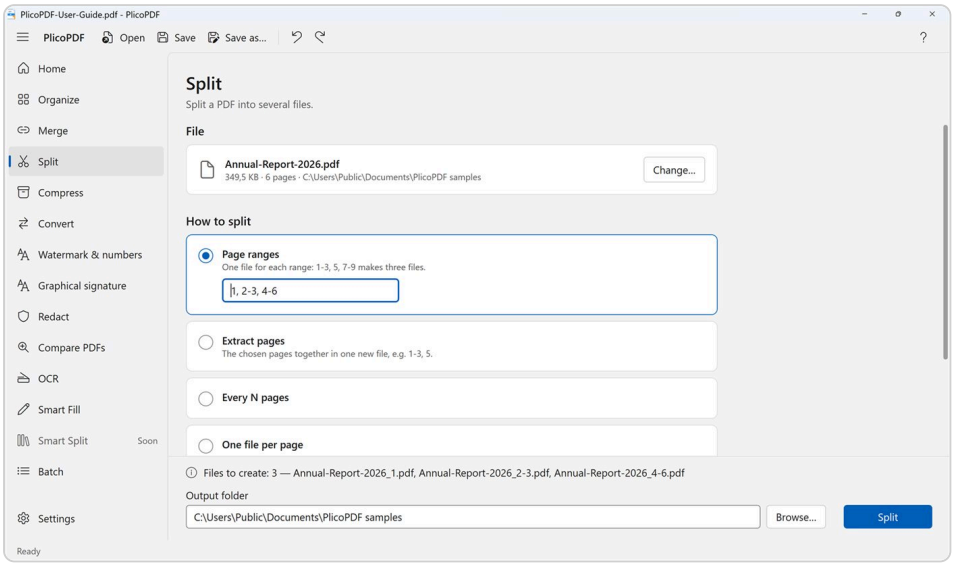

You can **Cancel** while the merge runs: no partial file is saved, and an existing destination is left unchanged.

> To add only some pages of another PDF, open your document in **Organize**, use **Insert...** and arrange the pages with drag and drop.

CHAPTER 6

Split a PDF

Split a PDF into several files. Your original file is not changed.

Split: choose how to split and where to save the files.

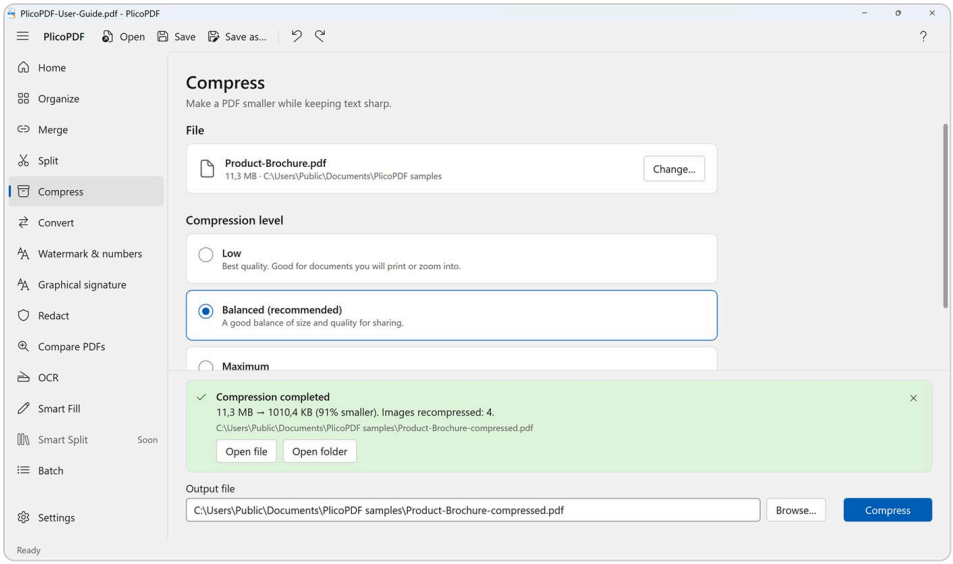

1. Choose **Split** and choose or drop the PDF.
2. Under **How to split**, pick an option from the table.
3. Check the **Output folder** and click **Split**. PlicoPDF shows the files it will create before you start.

Option	Result
Page ranges	One file for each range: `1-3, 5, 7-9` makes three files.
Extract pages	The chosen pages together in one new file, for example `1-3, 5`.
Every N pages	A new file every N pages (**Pages per file**).
One file per page	Each page becomes a separate PDF.
Odd pages only / Even pages only	Only the odd or only the even pages.

CHAPTER 7

Compress a PDF

Make a PDF smaller while keeping text sharp. PlicoPDF recompresses the JPEG images inside the PDF and leaves text and vector graphics untouched.

Compress: three levels, and an optional grayscale conversion.

1. Choose **Compress** and choose or drop the PDF.
2. Pick a **Compression level** and, optionally, tick **Convert images to grayscale**.
3. Check the **Output file** and click **Compress**. PlicoPDF saves a new file and shows the size before and after. You can **Cancel** while it runs.

Level	When to use it
Low	Best quality. Good for documents you will print or zoom into.
Balanced (recommended)	A good balance of size and quality for sharing.
Maximum	Smallest file. Good for email and archiving scans.

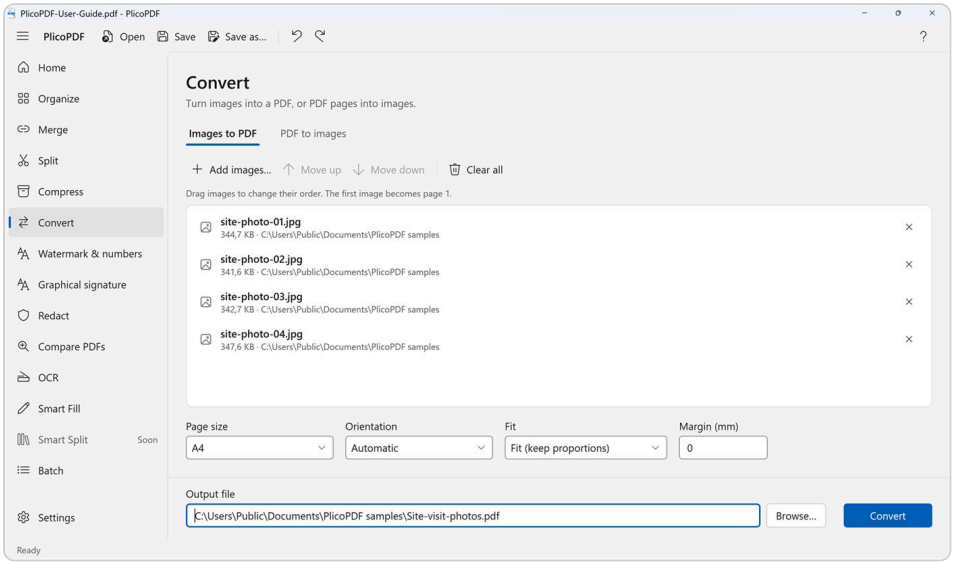

What to expect. The biggest savings come from PDFs with photos or scanned pages stored as JPEG images. A PDF that contains mostly text or vector drawings may shrink only a little; in that case PlicoPDF tells you that the file could not be made smaller.

CHAPTER 8

Convert images and PDF pages

Convert has two tabs: **Images to PDF** and **PDF to images**.

Images to PDF

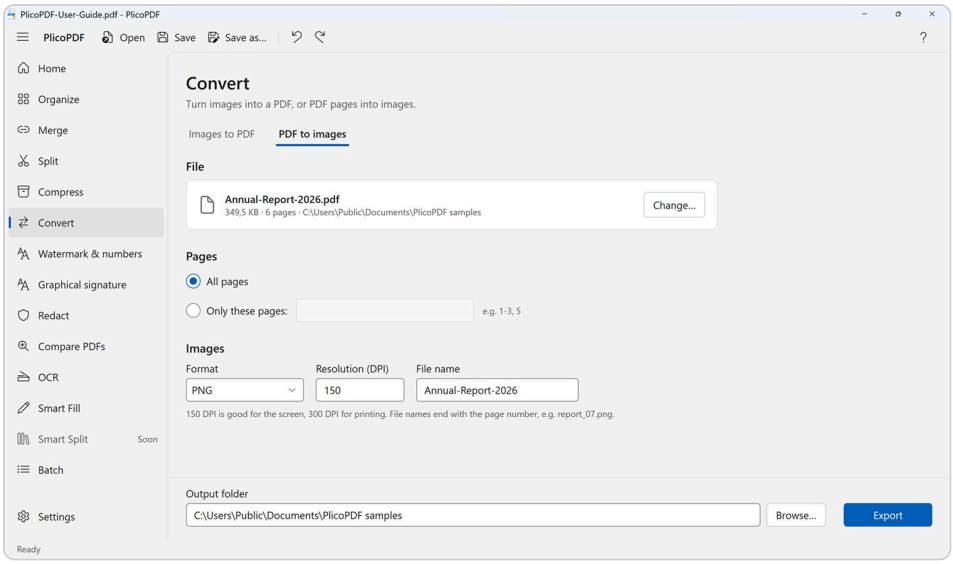

Images to PDF: each image becomes a page.

1. Choose **Convert**, then the **Images to PDF** tab.
2. Click **Add images...** or drop images onto the window: JPG, PNG, TIFF (also multi-page), BMP or WebP. Drag them to change the order: the first image becomes page 1.
3. Set the page options, check the **Output file** and click **Convert**.

Option	Choices
Page size	A4, A3, Letter, Original image size, Custom
Orientation	Automatic, Portrait, Landscape
Fit	Fit (keep proportions), Fill (crop edges), Stretch
Margin (mm)	Space around the image, in millimetres

PDF to images

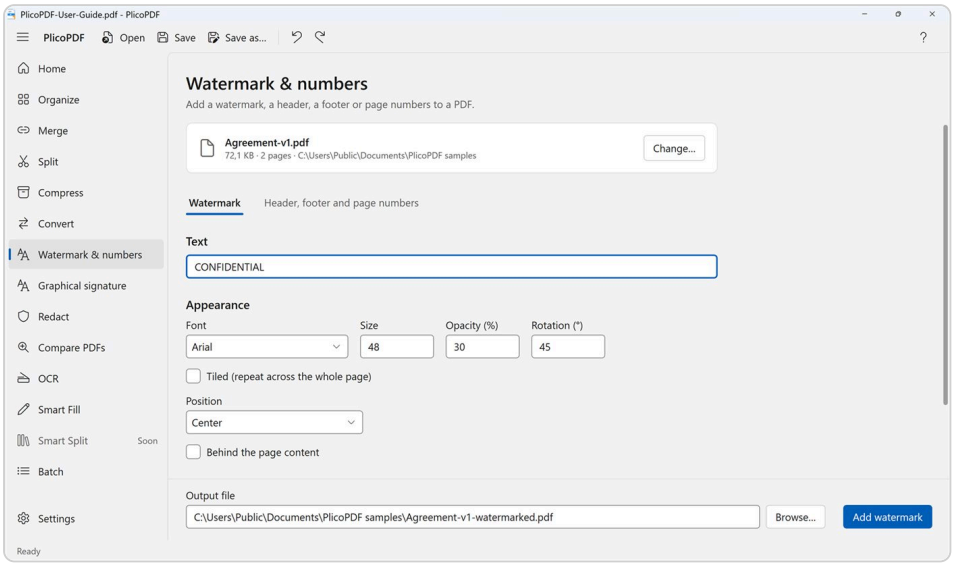

PDF to images: export all pages or a selection.

1. Choose the **PDF to images** tab and choose or drop the PDF.
2. Under **Pages**, keep **All pages** or choose **Only these pages:** (for example `1-3, 5`).
3. Choose the **Format** (PNG, JPEG or TIFF), the **Resolution (DPI)** and, for JPEG, the **JPEG quality**. 150 DPI is good for the screen, 300 DPI for printing.
4. Set the **File name** and the **Output folder**, then click **Export**. File names end with the page number, for example `report_07.png`.

CHAPTER 9

Watermark, page numbers, headers and footers

Use **Watermark & numbers** to add text to the pages of a PDF. The result is a new file.

Watermark & numbers: two tabs, one for each kind of text.

Watermark

1. Choose **Watermark & numbers**, then the **Watermark** tab, and choose or drop the PDF.
2. Type the **Text** and set its **Appearance**: **Font**, **Size**, **Opacity (%)** and **Rotation (°)**.
3. Choose one of nine **Positions**, or tick **Tiled (repeat across the whole page)**. Tick **Behind the page content** to place it under the text and images.
4. Choose the **Pages** and click **Add watermark**.

Header, footer and page numbers

In the **Header, footer and page numbers** tab there are six independent boxes: **Left**, **Center** and **Right**, in the **Header** and in the **Footer**. Leave a box empty to skip it. Set the **Text style** and the **Pages**, then click **Add to pages**. You can use these placeholders:

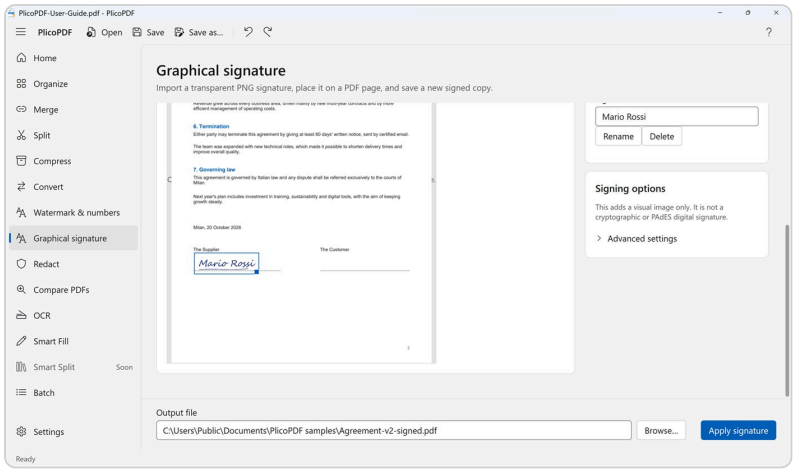

Placeholder	Replaced with
`{page}`	The page number
`{pages}`	The total number of pages
`{filename}`	The file name
`{date}` / `{datetime}`	Today's date, or date and time

> Example: a footer with `Page {page} of {pages}` in the **Center** box.

CHAPTER 10

Graphical signature

Place an image of your handwritten signature on a PDF page and save a new signed copy.

Graphical signature: drag on the page to place and size the signature.

A visual signature only. This adds an image to the page. It is not a cryptographic, qualified or PAdES digital signature.

Store your signatures

Under **Stored signatures**, click **Import PNG...** and choose a PNG image with a transparent background (up to 5 MB and 4096 × 4096 pixels). You can store several signatures, give each a **Signature name**, **Rename** or **Delete** them. They are saved only on this PC, encrypted for your Windows user.

Sign a PDF

1. Choose **Graphical signature** and choose the PDF.
2. Pick the **PDF page** and the **Signature image**.
3. Drag on the page to place and size the signature. Drag it to move it; drag its lower-right handle to resize it.
4. Check the **Output file** and click **Apply signature**. The original PDF is not changed, and an existing file is never replaced: choose a different name if the file already exists.

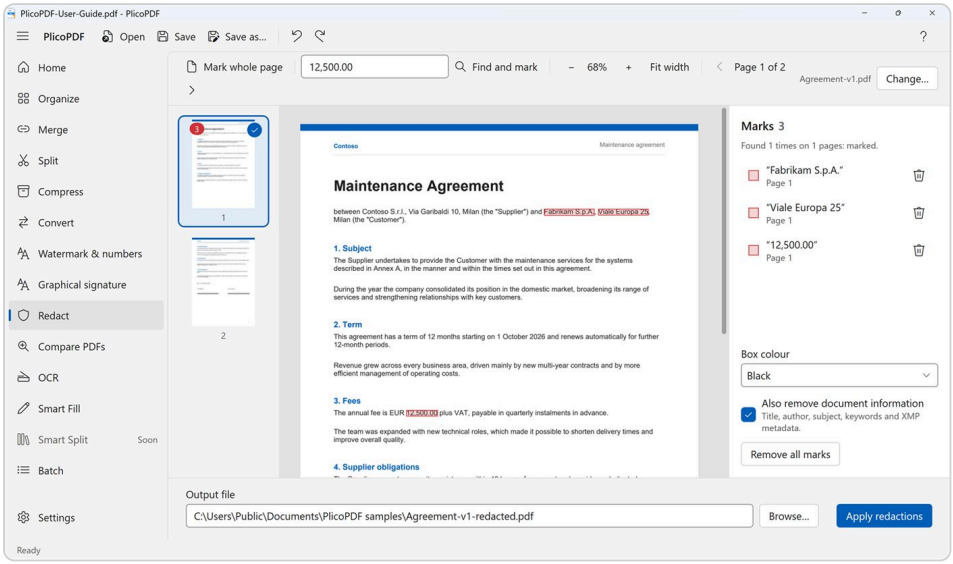

Scan effect

Under **Advanced settings**, **Simulate printing, signing by hand, and scanning** makes the document look as if it had been printed, signed with a pen and scanned: every page becomes a 300 DPI colour image, with paper imperfections, skew, noise and blur. Set the **Scan effect intensity**; PlicoPDF asks for confirmation, because the text can no longer be searched or selected and no OCR layer is added. It works on documents of up to 100 pages.

CHAPTER 11

Redact sensitive content

Redact permanently removes sensitive text and images from a PDF, or empties whole pages. The content is deleted, not just covered, and the original file is not changed.

Redact: marked areas, and the list of marks on the right.

1. Choose **Redact** and choose or drop the PDF. Use **Zoom in**, **Zoom out**, **Fit width** and the page buttons to move around the document.
2. Mark what to remove:
   - **Areas:** drag on the page.
   - **Text:** type it in **Text to find** and click **Find and mark**. Every occurrence in the document is marked; case and accents are ignored. Scanned pages without a text layer can only be marked by dragging.
   - **Whole pages:** click **Mark whole page**. The page stays in the document, but all its content is removed and replaced by a filled box. To delete pages, use Organize.
3. Review the **Marks**: **Remove mark** or **Remove all marks** if needed. Choose the **Box colour** (Black or White) and, if you want, tick **Also remove document information** (title, author, subject, keywords and XMP metadata).
4. Check the **Output file**, click **Apply redactions** and confirm. PlicoPDF saves a new PDF.

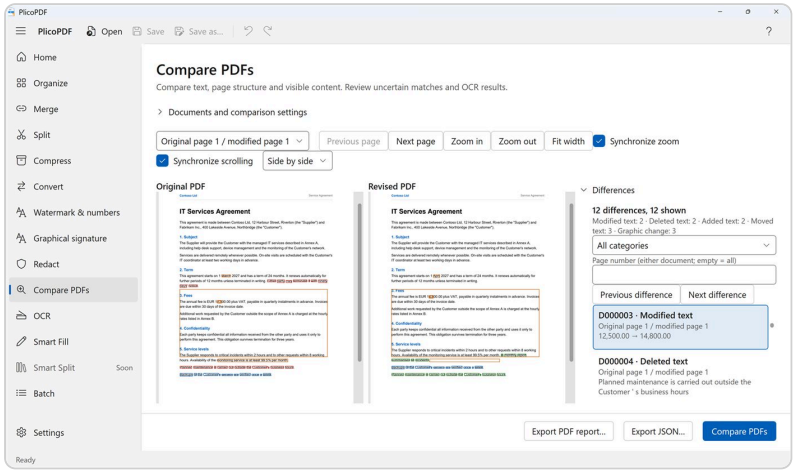

> **Checked after applying.** In the new file the marked content is deleted and replaced by a box; the rest of each page stays exactly as it was. PlicoPDF then checks the result and confirms that no text is left in the marked areas. Images in the marked areas are redacted too, but are not checked again.

If a page cannot be edited precisely, PlicoPDF converts that page to an image and tells you which pages: their remaining text can no longer be selected. Vector shapes that only cross a marked area stay under the box, and bookmarks and form fields on other pages are kept: check the result before sharing it.

CHAPTER 12 · NEW IN 0.8.0

Compare PDFs

Compare two versions of a PDF: what was added, deleted, changed or moved, in the text, in the images and in the page structure. Both files are only read, never changed.

Compare PDFs: the two documents side by side, with the differences highlighted and listed.

Compare two documents

1. Choose **Compare PDFs**.
2. Choose or drop the **Original PDF** and the **Revised PDF**. **Swap documents** exchanges them.
3. Choose the **Comparison mode** and the options (see below).
4. Click **Compare PDFs**. Progress is shown page by page, and you can **Cancel** at any time.

Comparison modes

Mode	What it compares
Complete (text and visual)	The default. Text word by word and character by character, images, graphics and layout.
Text	Only the text and the page structure.
Visual	Only how the pages look: each page of both files is drawn and the images are compared.

Options

- **Ignore letter case**, **Ignore visible spacing** (on by default) and **Ignore text formatting and layout**. Ignoring formatting hides changes of text position, font and page size, but keeps changes to the text and the images.
- **Use local OCR (Italian + English)**, on by default, reads the text of scanned pages on your PC. OCR text is approximate: check the highlighted changes on the page. Without OCR, scanned pages are compared only visually.
- **Advanced tolerances**: **Colour tolerance (0–100)** and **Edge tolerance in pixels (0–3)**. Higher values ignore smaller differences in colour and position.

How pages are matched

PlicoPDF does not simply compare page 3 with page 3. It matches the pages by their content, so it recognizes pages that were inserted, deleted or moved, and the pages after an inserted page are not reported as different. Each match shows a *page match* score: it is a heuristic estimate, not a certainty. When two pages are too similar to tell apart (for example duplicates), the match is reported as ambiguous and those pages are not compared.

Review the differences

The **Differences** list shows every change with its category and pages; the same changes are outlined on both documents: green for added, red for deleted, orange for modified and blue for moved. Selecting a difference in the list or on the page shows it in both documents.

Category	Changes
Text	Added text, Deleted text, Modified text, Moved text
Images	Added image, Deleted image, Modified image, Moved or resized image
Graphics	Graphic change (lines, shapes and other drawn areas)
Layout	Formatting or layout (position, font, page size)
Pages	Added page, Deleted page, Moved page

- **Filter by category**, or type a page number to see only the differences on that page of either document.
- **Previous difference** and **Next difference** move through the list.
- **Document display**: **Side by side**, **Original only** or **Modified only**.
- **Zoom in**, **Zoom out** and **Fit width**. With **Synchronize zoom** and **Synchronize scrolling** (both on by default) the two documents move together. Turn off **Synchronize zoom** to zoom each one separately with Ctrl + mouse wheel.

Export a report

Export PDF report... saves a readable report; **Export JSON...** saves the same data in a structured file for other programs. The report lists the file names, date and time, settings, counts by category, every difference with its pages, coordinates and text before and after, and any warnings. It does not contain the local paths of your documents.

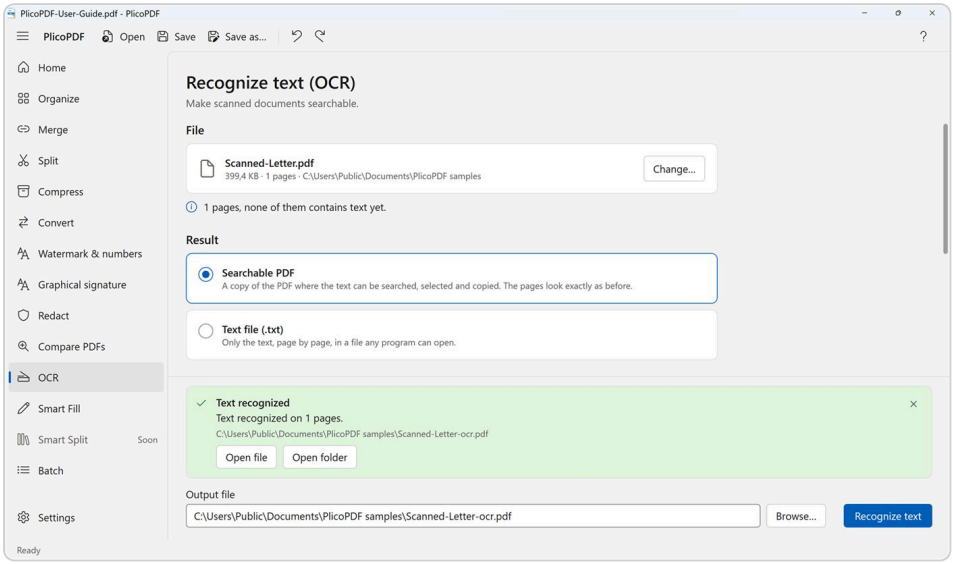

Limits

- Compare finds differences; it does not judge whether two different sentences mean the same thing. Tables are compared by content and position, not as rows and cells. Complex multi-column layouts, unusual fonts and scans may need a visual check.
- Password-protected PDFs are not supported yet. Up to 1000 pages per document; very long or dense pages may be compared only in part, and PlicoPDF then shows a warning (**Incomplete or uncertain comparison**) instead of reporting the documents as identical.

CHAPTER 13

Recognize text (OCR)

OCR reads the text of scanned PDFs, so you can search, select and copy it. Recognition runs entirely on your PC: the document is never sent anywhere.

Recognize text (OCR): choose the result and the language of the document.

1. Choose **OCR** in the navigation (or **Recognize text (OCR)...** in the **More** menu of Organize) and choose or drop the PDF. PlicoPDF tells you how many pages already contain text.
2. Choose the **Result**:
   - **Searchable PDF**: a copy of the PDF where the text can be searched, selected and copied. The pages look exactly as before.
   - **Text file (.txt)**: only the text, page by page, in a file any program can open.
3. Choose the **Document language**: **Italian + English**, **Italian** or **English**. Choosing the right one improves accuracy.
4. Choose the **Pages**. Pages that already contain text are skipped, unless you tick **Also recognize pages that already contain text** (useful when their text is incomplete or wrong).
5. Check the **Output file** and click **Recognize text**. Recognition takes a few seconds per page; **Cancel** stops after the current page and creates no file.

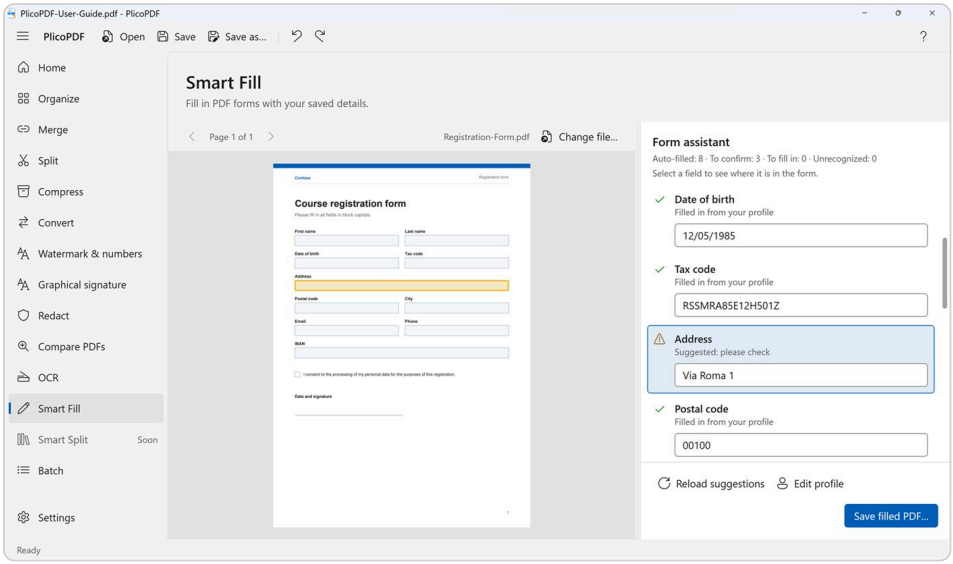

> If the scan quality seems low, PlicoPDF tells you: check the text and, if you can, scan the document again at a higher resolution. The original file is never changed.

Password-protected PDFs are not supported yet. Only Italian and English are available for now.

CHAPTER 14

Smart Fill for PDF forms

Smart Fill opens a PDF form, recognizes its fields and fills in what it knows from your personal profile. You check every value before saving.

Smart Fill: the form fields with their status, and the page preview.

1. Set up your profile once in **Settings** › **Personal profile** (or click **Set up profile**): name, date of birth, tax code, address, email, phone, company, VAT number, IBAN. Click **Save profile**.
2. Choose **Smart Fill** and open a PDF form with **Choose PDF...**.
3. Review the **Form fields**. Each field shows its status: *Filled in from your profile*, *Suggested: please check*, *Not in your profile: please fill in*, *Not recognized: fill in if needed* or *Needs your confirmation*. Selecting a field highlights its position in the page preview.
4. Change any value you need, then click **Save filled PDF...**. The original form is not changed.

Reload suggestions fills the fields again from your profile (values you typed are replaced); **Edit profile** opens your profile.

Never filled in for you: fields that need your explicit consent, such as declarations and signatures, are never filled in automatically.

Smart Fill works with PDF forms that have **fillable fields**. If a PDF has none (for example a scan, or a document with only blank lines), PlicoPDF shows **No fillable fields**.

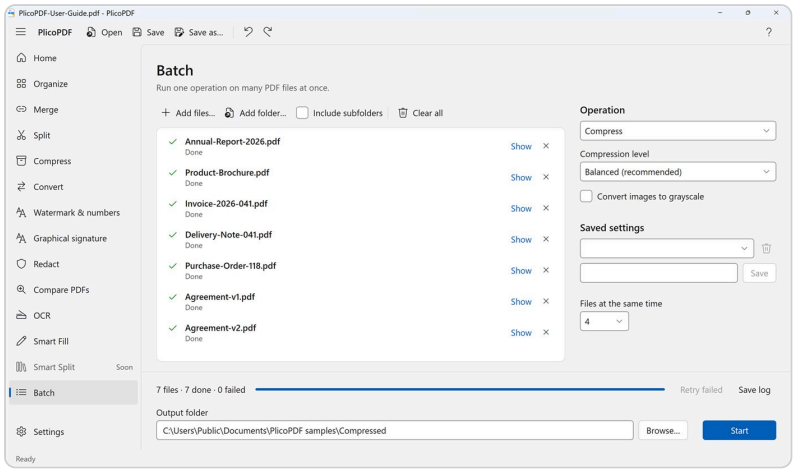

Where your profile is stored

The profile is stored only on this PC, encrypted for your Windows account with Windows data protection. It is used only to suggest values in PDF forms and is never uploaded. **Delete profile...** in Settings removes it.

CHAPTER 15

Batch processing

Apply the same operation to many PDF files, or to whole folders including subfolders.

Batch: the files to process, the operation and its settings.

1. Choose **Batch**. Click **Add files...** or **Add folder...** (tick **Include subfolders** if needed), or drop files and folders onto the window.
2. Choose the **Operation** and its settings.
3. Choose how many **Files at the same time** to process (1 to 4) and the **Output folder**.
4. Click **Start**. Each file shows its status (*Waiting*, *Processing...*, *Done*, *Failed*); **Show** opens a result. You can **Cancel** at any moment.

Operation	What it does
Compress	Compression level and grayscale, as in Compress.
Add a watermark	Text, size, opacity, rotation, tiled.
Add page numbers, header or footer	Centered header and footer, with placeholders.
Remove document information	Removes title, author, subject, keywords and creator. The pages are not changed.
Export pages as images	Format and resolution; one folder of images for each file.
Split every N pages	One folder of parts for each file.
Recognize text (OCR)	Searchable PDF or .txt, language, pages with text. Files that are already searchable are copied unchanged.

- **Safe by default.** Results never replace existing files, the original files are not changed, and a file that fails does not stop the others.
- **Retry and reuse. Retry failed** processes the failed files again, and **Save log** writes a text log. Under **Saved settings**, give the current settings a name and click **Save** to use them again.

CHAPTER 16

Settings and privacy

Settings

Section	What you find there
Appearance	**Theme**: Light, Dark or Use Windows setting. Applied immediately.
Language	English, Italian or System default. Applied immediately, without restarting; it does not change your documents.
Personal profile	The details used by Smart Fill: **Save profile**, **Delete profile...**.
About	Privacy summary, **Updates**, **Problems and suggestions**, **Diagnostic log** (**Open log folder**) and **Third-party components** (**Show licenses**).

Your documents stay on your PC

- **All processing is local.** PDF files, OCR, comparisons, signatures and your profile are processed only on your computer and never uploaded.
- **No account, no telemetry, no ads.**
- **One connection only:** the update check at startup, which asks only for the latest version number. Nothing about you or your documents is sent, updates are never installed without asking, and you can turn the check off in **Settings** › **About**.
- **Local files.** Settings, saved batch settings, the encrypted profile and signatures, and the diagnostic log are kept in the `PlicoData` folder of your user profile (`%LOCALAPPDATA%\PlicoData`). The log is kept for 14 days, contains no document content or personal details, and is never sent automatically.

The full privacy notice is at **plicopdf.com/privacy**.

CHAPTER 17

Troubleshooting and FAQ

Windows says “Windows protected your PC” when I run the installer.

The beta is not code-signed yet, so SmartScreen does not recognize the publisher. Click **More info**, then **Run anyway**. To check the file, compare its SHA-256 with the checksums on the download page. The Microsoft Store version does not show this warning.

The portable version does not start the first time.

On the first start, your antivirus may scan the program and block it for a moment. Wait a few seconds and start PlicoPDF again.

“Unable to open this PDF”.

The file may be damaged or password protected. Password-protected PDFs are not supported yet: remove the protection with the program that created it, then try again.

“The file is in use by another program”.

Close the file in the other program (for example a PDF viewer) and try again.

A tool does not include my latest changes.

Tools use the saved file. Save the document in Organize first.

Compress says the file could not be made smaller.

The PDF has no photos that can be compressed further; its text and drawings are already compact.

OCR says the PDF is already searchable.

Every page already contains text. To recognize it anyway, tick **Also recognize pages that already contain text**.

Find and mark in Redact does not find a word.

Scanned pages have no text layer: mark them by dragging on the page.

Compare reports some pages as ambiguous.

Those pages are too similar to be matched with certainty (for example repeated pages), so they were not compared. Check them visually.

How do I update PlicoPDF?

The installed and portable versions check for updates at startup and in **Settings** › **About**. The Microsoft Store version is updated by the Store.

How do I report a problem?

Use **Report a problem…** in the **Help and feedback** menu or in **Settings** › **About**. If it helps, attach today's log from **Open log folder**: it contains no document content.

CHAPTER 18

Coming next

Features we plan to add. They are **not available** in version 0.8.0.

Smart Split · Planned

Automatically separate the documents contained in a single PDF.

More OCR languages · Planned

Recognize text in more languages than Italian and English, downloaded only when you need them.

Scan cleanup · Planned

Straighten scanned pages, remove noise, improve contrast and find blank pages.

Password protection · Planned

Lock PDF files with a password, unlock them when you know it, and set permissions for printing and copying.

Smart Fill without form fields · Planned

Fill in digital PDFs that have no form fields, only blank lines to write on, with the same review before saving.

Thumbnail zoom · Planned

Make the page thumbnails larger or smaller.

PlicoPDF for Android · Planned

A PlicoPDF app for Android phones and tablets, starting with scanning multi-page documents to PDF.

Plans can change. A feature is listed as available only once it is in the app.
